Project

Health consulting website

HTML, CSS, JS, VS Code | September 2023
GitHub Link: https://github.com/haialibaba/DACN
Description:

- This website is an online platform dedicated to health consultation and providing medical examination and treatment services. It provides an interface for both users and administrators.

Homepage:

- Display categorized categories by pagination using Ajax.

- Allows searching by name with paginated results. Advanced search includes searching by name, category, and disease-related scope using Ajax.

- Provides login/logout functionality with Ajax login authentication.

- Registration required to become a customer and participate in consulting.

- Allows customers to choose the appointment time and review the scheduled examination time.

Admin:

- Admin interface with distinct logout functionality and links to add, edit, delete, and manage users.

- Additional information including image upload.

- Editing will display accurate information before editing, including editing and deleting images.

- Delete products with confirmation before deletion using JavaScript.

- Manage customers, including viewing orders over a period of time, viewing details, and booking status.

Number of Contributors: 4
My Role:

- Home page: Displays customer page, customer information, log in/out.

- Administrator: Customer management.

Store selling electronics

ReactJs, HTML, CSS, JS, VS Code | Sep. 2023
GitHub Link: https://github.com/teamdptl/EcommerceApp
